

## Series GW control valves

### Globe, 3-way mixing & diverting, top and bottom seat guided

Metso's Neles series GW, 3-way top and bottom seat guided globe valves are high performance control valves with the all inherent benefits of linear control valves. The primary application is temperature control. GW design combines the benefits of strong guiding with an unbalanced trim design. The actuator selection is done the same way as single seated valves.

The flow either comes into one side port and is diverted to the other side port and bottom port or it comes into the side and bottom ports and is mixed internally and passed to other side port.

GW standard seat leakage is ANSI B16.104 Class II and optionally Class III.

Standard units are equipped with spring diaphragm or cylinder actuators and ND9000 intelligent valve controllers extended operational life and performance monitoring on-line.

#### Construction

- Heavy duty guiding with top and bottom seat for stable control
- Both diverting and mixing type available depending on the application
- Wide material selection for different applications
- All trim components removable from the bottom side after removed bottom flange
- Many end connection styles available for different applications
- Extension bonnet design for wide temperature range
- ND9000 digital valve controller with online diagnostics enables performance follow up and predictive maintenance
- Efficient asset management with Metso FieldCare open architecture software and excellent networking Safety and quality
- Rugged one piece body and bottom flange structure to minimize the leak paths
- Strictly tested to ensure specified performance with quality assurance systems in according to ISO 9001
- Certified ISO 15848 fugitive emissions
- Certified CE/PED & ATEX, TSG & EAC (GOST-R)

#### Accurate control & performance

- ND9000 digital valve controller for auto-calibration and accurate control
- Accurate and sensitive diaphragm and cylinder actuators
- Stable flow control with high rangeability
- Streamline flow passage to secure capacity

#### Benefits of GW series applications

- Commonly used in temperature control applications
- Top & bottom seated guiding reduces the vibration of the plug, which could cause valve failure
- Prolonged trim and valve life time
- Stable control of valve and process

#### Accessories

A variety of accessories are available including Neles positioners and limit switches, solenoid valves, transducers, relays, boosters and volume tanks and build-in volume chambers etc.

Standard trim design

Series GW, Cylindrical plug trim

Series GW, standard cylindrical plug offers a smooth flow profile and heavy duty guiding.

The arrangement of opened small and/or large drilled holes defines the flow path and the flow characteristics of the valve (standard is linear).

The trim design combines benefits of stronger guiding with top and bottom seat rings and the solid cylindrical plug provides strong support to ensure valve alignment.
