Mobile Robots
TRANSFORMING MANUFACTURING AND LOGISTICS
Modernize Your Workflow

Omron mobile robots are Autonomous Intelligent Vehicles (AIVs) designed to dramatically increase productivity in manufacturing and logistics operations. In addition to making your employees more efficient by allowing them to focus on tasks that require complex human skills, Omron mobile robots increase throughput, reduce machine dwell time, eliminate errors and improve material traceability.

Flexible

CUSTOMIZABLE PAYLOAD DESIGNS
- Easy conveyor-top integration
- Supports collaborative robotic arm
- Transports carts and totes
- Power, IO, Wi-Fi

Safe

FULL SAFETY COMPLIANCE
- Works collaboratively with people
- Able to avoid static and moving obstacles
- Easy addition of E-Stop equipment

EASY TO DEPLOY
with true natural-feature navigation
- Reduces cost: no facilities modifications
- No need to pre-program path
- Self-mapping with onboard PC
- Short installation time
**Efficient**

**OPTIMIZE YOUR OPERATIONS**
- Uses shortest allowable path
- Automatic alternative route planning
- Easily add pickup and delivery points

**Scalable**

**FLEETS OF UP TO 100 VEHICLES**
- Job dispatch and management
- Centralized configuration and map management
- Facilitates traffic flow
- Centralized point of communication

**ROBUST 24X7 PRODUCTIVITY**
- Opportunistic charging
- Capable of operating in highly dynamic environment
- Proven worldwide installed base
- >17 years of continuous experience
Thousands of possibilities to drive productivity gains.

Today, Omron has the largest installed base of Autonomous Intelligent Vehicles in manufacturing. Our mobile robots can be deployed in thousands of applications across multiple industries.

Advanced, Integrated Technology

Why are Omron mobile robots the most advanced Autonomous Intelligent Vehicles?

Mapping and Navigation

ROBUST NAVIGATION WITH ACUITY (Patented)

Acuity provides an additional method of “localization” to the onboard laser, to allow the robot to operate in frequently changing environments.

It identifies overhead lights and overlays the “light map” with the “floor map”. It also allows the robots to move easily across wide-open areas in large warehouses.

Safety

Omron mobile robots are fully safety compliant¹. They use an onboard laser and other sensors to detect obstacles in their path and, based on speed of travel, trigger an E-stop to prevent vehicle collision.

Sensors:
- Safety Rated Main Laser
- Lower Laser
- Side Lasers (Patented)
- Front Bumper
- Rear Sonar
- Rear Laser

¹Safety std: ISO 12100, ISO 14121-2, ISO 13849-1, IEC 61010 (battery only), IEC 60950 (battery only), EN 1525, ANSI B56.5 Part 3, JIS D 6802, IEC 60204
Fleet Management

ENTERPRISE MANAGER

Enterprise Manager is a network appliance that provides coordination of mobile robots while providing traceability, job allocation and traffic control across the entire fleet.

Transport Request (Job) Allocation: Distributes across multiple mobile robots by selecting the best vehicle to perform the job.

Traffic Control: Optimizes traffic flow of vehicles.

Communications: Single point of contact for integration with factory systems (MES, WMS, ERP, etc.).

MobilePlanner: PC-based software user interface to manage the robot or the fleet.
Let us help you mobilize your operations.
Global Collaborative Network

Robotics Expertise and Machine Automation Support provided by a **unique global team**.

Mobile Robots | Transforming manufacturing and logistics

Mobile Robot
LD Series

Autonomous Intelligent Vehicles (AIVs), self-mapping, self-navigation.

- Natural-feature navigation
  Automatically plans routes to prevent collisions

- Fleet management
  Supervises and coordinates the entire fleet of up to 100 vehicles

- Easy deployment
  Short installation time: no facilities modifications
