

ROBO Cylinder® Pulse Press

RCP6-RRA

Actuator compatible with presses that allows for simple power control

IAI's new pulse press!

■ What is a pulse press?

A pulse press is an actuator combining a stepper motor and load cell, that is capable of performing power control. It provides a loading repeatability of $\pm 1.0\%$ F.S. (full scale), based on feedback from the load cell.

POINT

F.S. : Full Scale

Maximum measurable value

1 Capable of both pushing and pulling

Both pushing and pulling are supported in the load direction. There are no limitations on pushing or pulling times.

Example) Washer press fitting (pushing)

Example) Wire harness pulling test

Example System for inspecting air leaks in sweet bread packaging

2 Reasonable cost

Equipped with a stepper motor, it is less than half the cost of an IAI servo press.

3 Lineup

Select from several types based on use (push force from 60N to 2,000N).

RCP6-RR4R	60N~300N
RCP6-RR6R	60N~600N
RCP6-RR7R	200N~2,000N

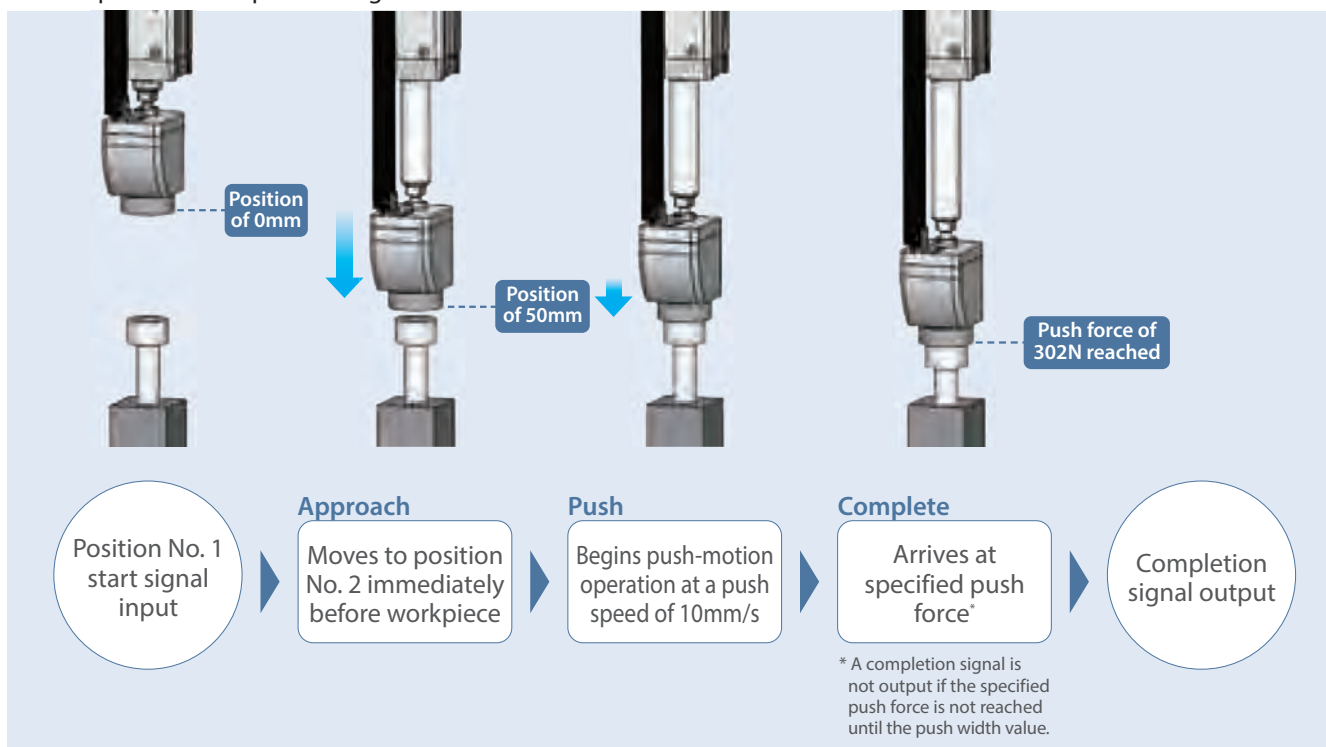

Easy setup using a dedicated tool

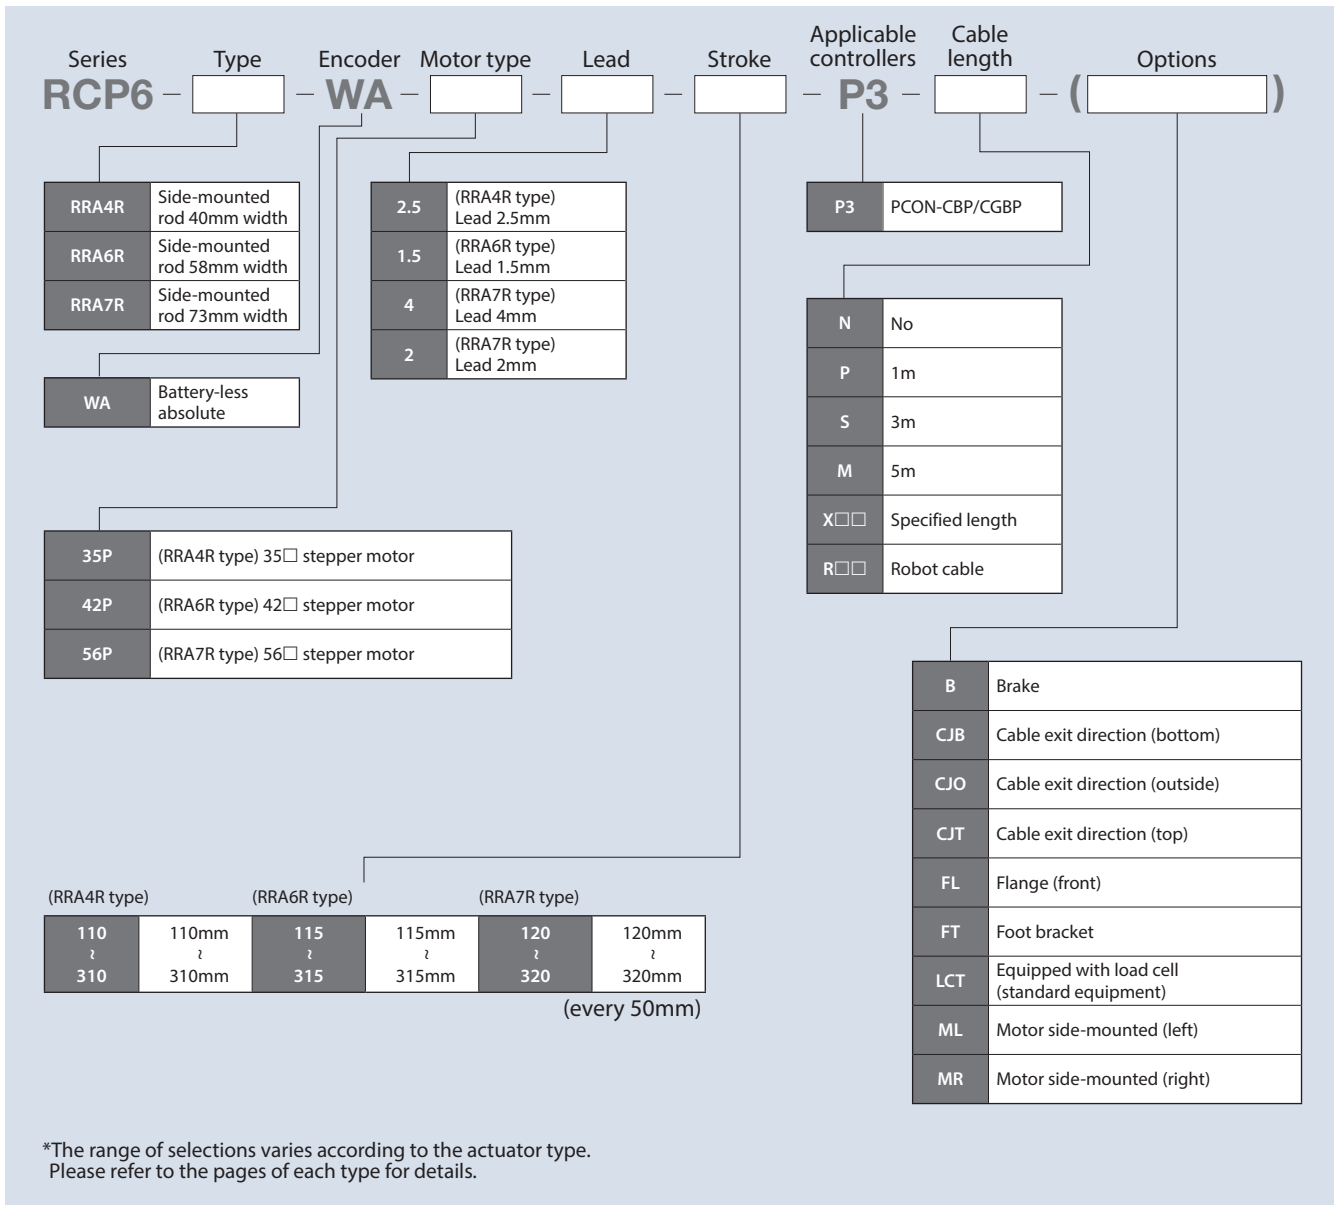

Pushing/pulling can easily be setup using the PC teaching software or teaching pendant.

■ PC teaching software (screenshot)

■ Example of washer press fitting

Specification Table

(Note) The figure above is the motor side-mounted to left (ML).

POINT Selection Notes

- (1) There are no limitations on the continuous push time or continuous pull time.
- (2) Continuous operation is possible at a duty ratio of 100%.
- (3) Pay close attention to the mounting method of the body. Please refer to P. 20 for details.
- (4) Pay close attention to the mounting orientation. Please refer to P. 20 for details.
- (5) Please refer to P. 20 for information on load cells.

(Note) Please refer to P.8-17 of the General Catalog 2021 for information on network abbreviation codes such as DV and CC.

Options

Brake

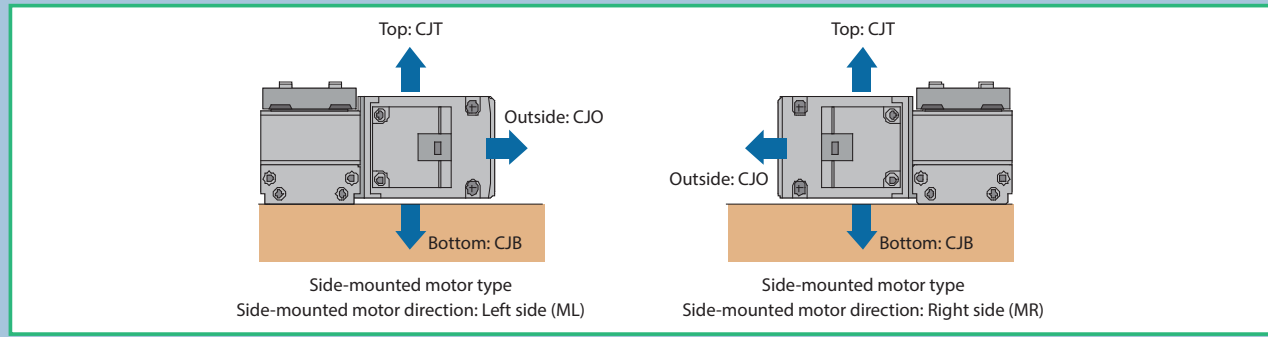

Model B

Description When the actuator is mounted vertically, this works as a holding mechanism that prevents the rod from falling and damaging any attachments when the power or servo is turned off.

Cable exit direction

Model CJT / CJB / CJO

Description This option allows the exit direction of the motor-encoder cable to be changed to top, bottom, or outside.

Flange (front)

Model FL

Description This bracket is used for mounting the actuator body side with bolts.

RCP6-RR4R(LCT)
Individual model number: RCP6L-FL-RR4 (Note 1)
(Individual weight: 0.14kg / Material: Steel)

RCP6-RR6R(LCT)
Individual model number: RCP6L-FL-RR6 (Note 1)
(Individual weight: 0.20kg / Material: Steel)

RCP6-RR7R(LCT)
Individual model number: RCP6L-FL-RR7 (Note 1)
(Individual weight: 0.36kg / Material: Steel)

(Note 1) 4 hex socket bolts enclosed

Foot bracket**Model FT**

Description This bracket is used for mounting the actuator body from the top with bolts. The actuator body may be twisted or deformed if an insufficient number of mounting foot brackets are used. Actuator life could also be shortened.
* Refer to the installation dimensions in the actuator drawing for the installation pitch between the foot brackets.

RCP6-RA4R

Individual model number: RCS3-FT-RA4-2 (Note 1)

(Note 1) 2 hex socket bolts enclosed

Equipped with load cell**Model LCT**

Description This option installs a load cell to the rod tip and operates with force control.
*LCT must be selected for pulse press.

Motor side-mounted direction**Model ML / MR**

Description This code is for specifying the motor side-mounted direction. Side-mounted to left is ML and right is MR.

Side-mounted to left (ML) Side-mounted to right (MR)

Maintenance parts

Maintenance part schematics

- ① Motor unit
- ② Coupling spacer
- ③ Timing belt
- ④ Load cell unit
- ⑤ Cable track assembly
- ⑥ Load cell cable assembly

* Please refer to the dimensions on the product pages for the direction and dimensions when selecting the cable exit direction option.

Maintenance part model list

The numbers in the tables match the numbers in the schematics.

Mounting orientation and load cell handling precautions

Mounting orientation

Horizontal mounting on flat surface

Vertical mounting

Horizontal mounting to side

Horizontal mounting suspended

- Keep the body installation surface and workpiece mounting surface flatness at 0.05mm/m or lower. Uneven flatness will increase the sliding resistance of the slider and may cause a malfunction.

Precautions for installation

Keep the following in mind when using a screw hole or foot bracket to fix in place.

- 1 Do not attempt to apply any external force to the body of ROBO Cylinder. External force may cause malfunctions or damage to parts.

- 2 Prepare a support block as shown in the figure below when fixing the base seating surface horizontally, even if there is no external force applied on the body.

Load cell handling precautions

- Never push/pull during positioning operations. Doing so will damage the load cell.
- Use with a jig mounted to the load cell.

- Do not apply a radial load or moment load to the body of the load cell.
- Do not subject the body of the load cell to collisions or other shocks exceeding the specified value. Be especially careful not to mistakenly collide with the load cell during mounting.
- Be careful not to hold the product by the load cell when transporting it.
- The load cell must be periodically calibrated. Please refer to the instruction manual for information on calibration.

PCON-CBP

Pulse press dedicated controller

(*1)

(*1) CC-Link IE Field and MECHATROLINK-I/II connection specifications are not CE Marking compliant

Features

1 High resolution battery-less absolute encoder support

Pulse press specification actuators are equipped with high resolution battery-less absolute encoders. As no battery is needed for retaining position data, it is possible to save space around the control panel, which helps to keep down the cost of the equipment.

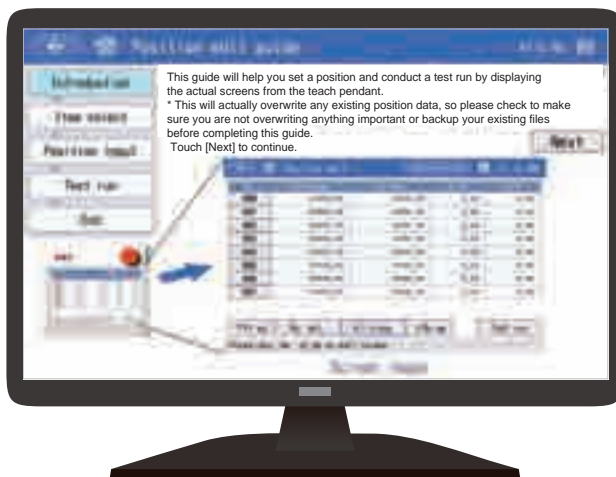

2 Supports force control using a load cell

The current load value can be read from the load cell. Load directions are supported from either press fitting or pulling, and can be easily switched out by specifying position data.

3 N unit display support for target loads

Position data pushing (%) is displayed as a converted target load (N). If the collision detection function is disabled, a converted "N" value is also displayed for the threshold (%).

Maximum load current	50mA, 1 circuit
Leakage current	2mA max./point

Types of PIO Patterns (Control Patterns)

This controller has 8 types of control methods.

Please set the PIO pattern that best suits your application in Parameter No.25, "PIO Pattern Selection."

Type	Set value of parameter No.25	Mode	Overview
PIO pattern 0	0 (factory setting)	Positioning mode (standard type)	<ul style="list-style-type: none"> •Number of positioning points: 64 points •Zone signal output^{*1}: 1 point •Position number command: Binary code •Position zone signal output^{*2}: 1 point
PIO pattern 1	1	Teaching mode (teaching type)	<ul style="list-style-type: none"> •Number of positioning points: 64 points •Position zone signal output^{*2}: 1 point •Jog (inching) operation using PIO signals is supported •Current position data can be written to the position table using PIO signals
PIO pattern 2	2	256-point mode (256 positioning points type)	<ul style="list-style-type: none"> •Number of positioning points: 256 points •Position number command: Binary code •Position zone signal output^{*2}: 1 point
PIO pattern 3	3	512 mode (512 positioning points type)	<ul style="list-style-type: none"> •Number of positioning points: 512 points •Position number command: Binary code •No zone signal output
PIO pattern 4	4	Solenoid valve mode 1 (7-point type)	<ul style="list-style-type: none"> •Number of positioning points: 7 points •Zone signal output^{*1}: 1 point •Position number command: Individual number signal ON •Position zone signal output^{*2}: 1 point
PIO pattern 5	5	Solenoid valve mode 2 (3-point type)	<ul style="list-style-type: none"> •Number of positioning points: 3 points •Completion signal: A signal equivalent to a LS (limit switch) signal can be output •Zone signal output^{*1}: 1 point •Position zone signal output^{*2}: 1 point
PIO pattern 6	6	Force control mode 1	<ul style="list-style-type: none"> •Number of positioning points: 32 points •Position zone signal output^{*2}: 1 point •Load cell calibration command
PIO pattern 7	7	Force control mode 2	<ul style="list-style-type: none"> •Number of positioning points: 5 points •Position zone signal output^{*2}: 1 point •Load cell calibration command

*1 Zone signal output: Please set the desired zone range in Parameter No.1/2 or 23/24. It will remain effective once home return is completed.

*2 Position zone signal output: This command function relates to the position number. Set the desired zone range in the position table. This function will only become enabled when the corresponding position is specified. It will be disabled for all other position commands.

PIO Patterns and Signal Assignments

The table below lists the signal assignments for the I/O flat cable under different PIO patterns. Connect an external device (such as a PLC) according to this table.

Pin number	Category	PIO function	Parameter No.25, "PIO Pattern Selection"							
			0	1	2	3	4	5	6	7

(Note) In the table above, the asterisk (*) symbol accompanying each code indicates a negative logic signal. PM1 through PM8 are alarm binary code output signals that are used when an alarm is generated.

(Note 1) In all PIO patterns other than pattern 3, this signal can be switched with PZONE by setting Parameter No.149 accordingly.

(Note 2) The setting will not become effective until the home return is completed.

Reference: Negative logic signals

Signals denoted by * are negative logic signals. Negative logic input signals are processed when turned OFF. Negative logic output signals normally remain ON while the power is supplied, and turn OFF when the signal is output.

Field Network Specification: Explanation of Operation Modes

If controlling via a field network, one of the following 8 modes can be selected to operate the actuator. Please note that the data areas required on the PLC side will vary depending on the mode.

Mode description

	Mode	Description
0	Remote I/O mode	Similar to the PIO specification, this mode operates by turning bits ON/OFF over a network. The number of positioning points and functions will vary depending on the operation patterns (PIO patterns) set by the controller's parameters.
1	Position/simple direct value mode	The target position value is directly input, while all other operational conditions (speed, acceleration, etc.) are used by specifying the position number of the desired operating condition entered in position data.
2	Half direct value mode	The actuator is operated by directly inputting values other than the target position (speed, acceleration/deceleration, and push current).
3	Full direct value mode	The actuator is operated by directly inputting values for the target position, speed, acceleration/deceleration rate, push current limit value, etc. The current position, current speed, command current value, and load cell data can also be read.
4	Remote I/O mode 2	This mode is the same as the remote I/O mode above, with the added functionality of reading the current position and command current value.
5	Position/simple direct value mode 2	This mode provides a force control function instead of the display and zone functions of the position/simple direct value mode above.
6	Half direct value mode 2	This can read load cell data instead of the command current (which is a function of the half direct value mode above).
7	Remote I/O mode 3	This mode is the same as the remote I/O mode above, with the added functionality of reading current position and load cell data.

Required data size for each network

Mode	DeviceNet	CompoNet	CC-Link	CC-Link IE Field	MECHATROLINK-I/II	PROFIBUS-DP	EtherCAT	EtherNet/IP	PROFINET IO
0 Remote I/O mode	2 bytes	2 bytes	1 station	4 words	2 bytes	2 bytes	2 bytes	2 bytes	2 bytes
1 Position/simple direct value mode	8 bytes	8 bytes	1 station	4 words	8 bytes	8 bytes	8 bytes	8 bytes	8 bytes
2 Half direct value mode	16 bytes	16 bytes	2 stations	8 words	16 bytes	16 bytes	16 bytes	16 bytes	16 bytes
3 Full direct value mode	32 bytes	32 bytes	4 stations	16 words	× (Note 1)	32 bytes	32 bytes	32 bytes	32 bytes
4 Remote I/O mode 2	12 bytes	12 bytes	1 station	4 words	12 bytes	12 bytes	12 bytes	12 bytes	12 bytes
5 Position/simple direct value mode 2	8 bytes	8 bytes	1 station	4 words	8 bytes	8 bytes	8 bytes	8 bytes	8 bytes
6 Half direct value mode 2	16 bytes	16 bytes	2 stations	8 words	16 bytes	16 bytes	16 bytes	16 bytes	16 bytes
7 Remote I/O mode 3	12 bytes	12 bytes	1 station	4 words	12 bytes	12 bytes	12 bytes	12 bytes	12 bytes

(Note 1) MECHATROLINK does not support the full direct value mode.

List of functions by operation mode

Mode	Remote I/O mode	Position/simple direct value mode	Half direct value mode	Full direct value mode (Note 1)	Remote I/O mode 2	Position/simple direct value mode 2	Half direct value mode 2	Remote I/O mode 3
Number of positioning points	512 points	768 points	Unlimited	Unlimited	512 points	768 points	Unlimited	512 points
Operates by direct assignment of position data	×	○	○	○	×	○	○	×
Direct assignment of speed/acceleration	×	×	○	○	×	×	○	×
Push-motion operation	○	○	○	○	○	○	○	○
Current position reading	×	○	○	○	○	○	○	○
Current speed reading	×	×	○	○	×	×	○	×
Operates by specifying position No.	○	○	×	×	○	○	×	○
Completed position number reading	○	○	×	×	○	○	×	○
Force control	△ (Note 2)	×	×	○	△ (Note 2)	○	○	△ (Note 2)
Current load data reading	×	×	×	○	×	○	○	○

* ○ indicates that the operation is supported, and × indicates that it is not supported.

(Note 1) MECHATROLINK does not support the full direct value mode.

(Note 2) Usable when PIO pattern is set to 6 or 7.

Specification List

Item		Specification
		PCON-CBP/CGBP
Number of controlled axes		1 axis
Power supply voltage		24VDC ±10%
Load current (including control-side current consumption) (Note 1)		High-output setting disabled: 2.2A max. High-output setting enabled: 3.5A rated / 4.2A max.
Electromagnetic brake power (for actuator with brake)		24VDC±10%, 0.15A (max.)
Inrush current (Note 2)		8.3A
Momentary power failure resistance		500μs max.
Supported encoders		High-resolution battery-less absolute encoder: 8192 pulses/rev
Actuator cable length		Up to 20m
External interface	PIO specification	Dedicated 24VDC signal input/output (NPN/PNP selection) Input max. of 16 points, output max. of 16 points, cable length max. of 10m
	Field network specification	DeviceNet, CC-Link, CC-Link IE Field, PROFIBUS-DP, CompoNet, MECHATROLINK-I/II, EtherCAT, EtherNet/IP, PROFINET IO
Data setting, input method		PC teaching software, touch panel teaching pendant
Data retention memory		Position data and parameters are saved in non-volatile memory (no limit to rewrite)
Operation mode		Positioner mode
Number of positioner-mode positions		Up to 512 points for positioner type or up to 768 points for network type (Note) The total number of positioning points varies depending on which PIO pattern is selected
Insulation resistance		10MΩ or more at 500VDC
Electric shock protection mechanism		Class I, basic insulation
Mass (Note 3)		Screw mounting specification: 250g or less, DIN rail mounting specification: 285g or less
Cooling method		Natural air cooling
Environment	Ambient operating temperature	0 ~ 40°C
	Ambient operating humidity	85% RH or less (no condensation)
	Operating environment	Free from corrosive gases
	Ingress protection	IP20

(Note 1) 0.3A higher for the field network specification.

(Note 2) Inrush current flows for approx. 5 msec after power is turned ON (at 40°C). Please note that the inrush current value varies depending on the impedance of the power line.

(Note 3) 30g heavier for the field network specification.

<PCON-CBP/CGBP>

Part Names

1 Controller display status LED

Indicates the status of the controller.
○: ON, ×: OFF, ☆: Blinking

LED		Operating status
SV (green)	ALM (red)	
×	×	Control power OFF
		Servo OFF
×	○	Alarm (operation cancel level or above)
		Motor drive power supply
		Emergency stop
○	×	Servo ON
☆	×	AUTO servo OFF
○ (orange)		Initialized when power is turned ON

2 PIO connector /field network connector

Cable connector for performing parallel communication with peripheral devices such as PLC.

3 Current/alarm monitor LED

Displays the normal command current ratio. Displays the alarm code when an alarm occurs.

LED	Operating status				
STS3 (green)	Status display -Servo ON: Displays the current command current ratio (proportion of rated value).				
STS2 (green)	STATUS				Command current ratio
	3	2	1	0	
STS1 (green)	ALM8	ALM4	ALM2	ALM1	Simple alarm code
	×	×	×	×	0.00% ~ 6.24%
STS0 (green)	×	×	×	○	6.25% ~ 24.99%
	×	×	○	○	25.00% ~ 49.99%
STS0 (green)	×	○	○	○	50.00% ~ 74.99%
	○	○	○	○	75.00% ~ 100.00% or higher

-During alarm: Displays a simple alarm code.

4 Axis number setting switch

Used to set an address to identify each controller, when controllers are linked.

5 Operation mode setting switch

Switch for the interlock.

Name	Description
MANU	Commands from PIO are not received
AUTO	Commands from PIO can be received

* The emergency stop switch on the touch panel teaching pendant is enabled when the connection is made, regardless of the status (AUTO or MANU). Be sure to turn the power OFF when disconnecting the touch panel teaching pendant and SIO communication cable.

6 SIO connector

Connector for touch panel teaching pendant or PC communication connection.

7 Motor/encoder connector

Connector to connect an actuator motor and encoder cable.

8 Power supply connector

Connector for power supply and emergency stop status signal input.

Options

Touch panel teaching pendant

Features A teaching device equipped with functions such as position teaching, trial operation, and monitoring.

Model **TB-02-**

Specifications

Rated voltage	24VDC
Power consumption	3.6W or less (150mA or less)
Ambient operating temperature	0 ~ 40°C
Ambient operating humidity	5%RH ~ 85%RH (no condensation)
Environmental resistance	IP20
Weight	470g (TB-02 unit only)

Teaching software for PC (Windows only)

Features This start-up support software provides functions such as position teaching, trial operation, and monitoring. It provides a complete range of functions required to make adjustments, to help reduce start-up time.

Model **IA-OS** (software only, for customers who already own a dedicated connection cable)
 * Please purchase through your distributor and a download link will be sent to your valid email address.

Configuration

Supported Windows versions: 7/10

Model **IA-OS-C** (with an external device communication cable + USB conversion adapter + USB cable)
 * Please purchase through your distributor and a download link will be sent to your valid email address.

Configuration

24V power

Overview

This power source supplies 24VDC. The "Calculator" software can be used to confirm the ideal power capacity.

Model **PSA-24 (without fan)**

Model **PSA-24L (with fan)**

Dummy plug

Features

When using safety category specification (PCON-CGBP), this will be required.

Model **DP-5**

Item	Specifications	
	100VAC input	200VAC input
Power input voltage range	100VAC ~ 230VAC±10%	
Input power supply current	3.9A or less	1.9A or less
Power capacity	Without fan: 250VA With fan: 390VA	Without fan: 280VA With fan: 380VA
Inrush current ^{*1}	Without fan: 17A (typ.) With fan: 27.4A (typ.)	Without fan: 34A (typ.) With fan: 54.8A (typ.)
Generated heat	28.6W	20.4W
Output voltage range ^{*2}	24V ±10%	
Continuous rated output	Without fan: 8.5A (204W), with fan: 13.8 (330W)	
Peak output	17A (408W)	
Efficiency	86% or more	90% or more
Parallel connection ^{*3}	Up to 5 units	

*1 The pulse width of flowing inrush current is 5ms or less.
 *2 This power supply can vary the output voltage according to the load in order to enable parallel operation. The power supply is therefore for use with IAI controllers only.
 *3 Parallel connection cannot be used under the following conditions.
 • Parallel connection of PSA-24 (specification without fan) and PSA-24L (specification with fan)
 • Parallel connection with a power supply unit other than this power supply
 • Parallel connection with P5-24

Maintenance Parts

When placing an order for a replacement cable after purchasing a product, please use the model name shown below.

■ Table of compatible cables

Model name	Motor/encoder cable	Motor/encoder robot cable
RCP6-RRR□□R-LCT	CB-CAN-MPA□□□□	CB-CAN-MPA□□□□-RB

Model name	PIO flat cable
PCON-CBP/CGBP	CB-PAC-PIO□□□□

Model **CB-CAN-MPA□□□□/CB-CAN-MPA□□□□-RB**

* Please indicate the cable length (L) in □□□, maximum 20m
Example) 080 = 8m

* The robot cable is designed for flex-resistance.
Please use the robot cable if the cable needs to be installed through a cable track.

(Note 1) If the cable length is 5m or more, φ9.1 cable diameter applies for both non-robot cables and robot cables.
